

# Coffee Lawsuit The McDonald's

By Kevin G. Cain\*

...  
Story . . .  
of the  
Rest  
And Now,

**S**omehow, somewhere along the way, the McDonald's coffee lawsuit became the poster child for frivolous lawsuits. Who hasn't taken a crack at this lawsuit for the sake of furthering their own cause? David Letterman and numerous other comedians have exploited this case as the punch-line to countless jokes.<sup>1</sup> One of my favorite Seinfeld episodes involves Cosmo Kramer suing Java World after Kramer spills a cup of café latté on himself while trying to get a seat at a movie theater.<sup>2</sup> Kramer suffers from minor burns that are easily remedied after a single application of a balm given to Kramer by the Maestro. Kramer asks his favorite attorney, Jackie Chiles, if the fact that he tried to sneak the coffee into the theater is going to be a problem in their lawsuit. Jackie responds, "Yeah, that's going to be a problem. It's gonna be a problem for them. This is a clear violation of your rights as a consumer. It's an infringement on your constitutional rights. It's outrageous, egregious, preposterous."<sup>3</sup> When Kramer asks if this lawsuit has a chance, Jackie responds, "Do we have a chance? You get me one coffee drinker on that jury, you gonna walk outta there a rich man."<sup>4</sup> Of course, Elaine is less than supportive when she finds out about Kramer's latest lawsuit and quips, "What I mean is who ever heard of this anyway? Suing a company because their coffee is too hot? Coffee is supposed to be hot."<sup>5</sup> Obviously, Jerry and company are taking their own shots at the McDonald's lawsuit in particular, and at frivolous lawsuits in general.

It seems that nearly everyone has an opinion about frivolous lawsuits. This author recently removed a box containing class handouts sitting on the floor in the middle of an entryway into a Bible classroom and asked the person who put the box there if he minded my moving the box because someone could accidentally get hurt. The person responded (knowing that I was an attorney) by simply snorting as he walked away, "I think everyone who files a frivolous lawsuit should be shot." "Objection, non-responsive," I thought, but you get the point. All too often there does not appear to be much we can do to change people's opinions on this subject. Or is there?

"Just the facts ma'am; just the facts." A line made famous by Dragnet's Sergeant Joe Friday may be the answer. Unfortunately, people often refuse to let the facts alter their points of view. "I have my opinion, and I won't let truth, reality, or the facts get in the way."<sup>6</sup> However, if people really knew the true facts about the McDonald's lawsuit, few would have the same opinion (or misconception) that they carry around today. Let's be honest. Most people, attorneys included, know little to nothing about the infamous McDonald's lawsuit other than the last joke they heard about it. A woman spilled some McDonald's coffee on herself, got burned, and got millions of dollars. That is about all most of us know about this woman and her legendary lawsuit. And yet many uninformed people have very strong opinions on this case. Well, as Paul Harvey says, "And now, the rest of the story."

#### Liebeck v. McDonald's Restaurants<sup>7</sup>

Seventy-nine-year-old Stella Liebeck of Albuquerque, New Mexico, was sitting in the passenger seat when her grandson drove his car through a McDonald's drive-thru window in February 1992.<sup>8</sup> Liebeck ordered coffee that was served in a McDonald's styrofoam cup.<sup>9</sup> After receiving the order, the grandson pulled his car forward and stopped for his grandmother to add sugar and cream to her coffee.<sup>10</sup>

(The rumors of Liebeck spilling her coffee while driving were inaccurate.<sup>11</sup> The car was not moving, and she was not driving.) While parked, Ms. Liebeck placed the cup between her knees and attempted to remove the plastic lid from the cup.<sup>12</sup> As she attempted to remove the lid, the contents of the cup spilled onto her lap.<sup>13</sup> The coffee was estimated to be somewhere between 180 to 190 degrees.<sup>14</sup> Ms. Liebeck was wearing sweatpants that day, which absorbed the scorching coffee, holding it next to her skin.<sup>15</sup> A vascular surgeon diagnosed Liebeck as having suffered full thickness burns (or third-degree burns)<sup>16</sup> over her inner thighs, perineum, buttocks, and genital and groin areas.<sup>17</sup> These third degree burns extended through to Liebeck's subcutaneous fat, muscle, or bone.<sup>18</sup> While she was hospitalized for eight days, Liebeck underwent skin grafting, and later underwent debridement<sup>19</sup> treatments.<sup>20</sup> Liebeck was permanently disfigured and disabled for two years as a result of this incident.<sup>21</sup>

Ms. Liebeck, a retired department store clerk, informed McDonald's of her accident and requested that McDonald's pay for her medical expenses totaling approximately \$11,000. McDonald's refused.<sup>22</sup> With no other recourse in sight, Ms. Liebeck retained a Houston attorney named Reed Morgan who had filed a similar hot-coffee lawsuit against McDonald's in 1986.<sup>23</sup> Mr. Morgan's prior case against McDonald's involved a Houston woman who suffered third-degree burns from McDonald's coffee.<sup>24</sup> In that 1986 case, Mr. Morgan deposed Christopher Appleton, a McDonald's quality assurance manager, who testified that "he was aware of this risk . . . and had no plans to turn down the heat."<sup>25</sup> McDonald's settled that case for \$27,500.<sup>26</sup>

Before filing suit, Liebeck requested that McDonald's pay \$90,000 for Liebeck's medical expenses and pain and suffering.<sup>27</sup> McDonald's countered with a generous offer of \$800.<sup>28</sup> Ms. Liebeck had never filed a lawsuit before in her life; and she said she never would have filed this lawsuit if McDonald's "hadn't dismissed her request for compensation for pain and medical bills with an offer of \$800."<sup>29</sup>

Ms. Liebeck brought suit against McDonald's in 1993 alleging that the coffee she purchased was defective because of its excessive heat and because of inadequate warnings.<sup>30</sup> Punitive damages were also sought based on the allegation that McDonald's acted with conscious indifference for the safety of its customers.<sup>31</sup> As the trial date neared, Liebeck's attorney offered to settle the case on her behalf for \$300,000 and reportedly would have settled for half that amount.<sup>32</sup> A mediator recommended a \$225,000 settlement on the eve of trial, but McDonald's again refused any attempt to settle.<sup>33</sup>

Evidence at trial was simply damning. It was learned that McDonald's was aware of more than 700 claims brought against it between 1982 and 1992 due to people being burned by its coffee.<sup>34</sup> Some of these claims involved third-degree burns that were substantially similar to the burns suffered by Liebeck.<sup>35</sup> Moreover, McDonald's had previously spent over \$500,000 in settling these prior coffee-burn claims.<sup>36</sup> In spite of the knowledge of these claims and this inherent danger with its coffee, McDonald's refused to change its corporate policy and serve its coffee at a safer temperature.<sup>37</sup>

**We have probably  
all heard someone  
say, "Watch out!  
That coffee is hot.  
You could have a  
lawsuit on your  
hands."**

Evidence at trial was simply damning.

Baxter, Liebeck's expert in thermodynamics, as applied to skin burns, testified that liquids can cause full thickness (third-degree) burns to skin in two to three seconds at 190 degrees, in 12 to 15 seconds at 180 degrees, and in 20 seconds at 160 degrees. Obviously, if Liebeck's coffee had been served just a little less scalding, vital seconds could have been added to her response time to allow her to get out of her grandsons' car and dispose to prevent more serious burns from occurring. Unfortunately, Ms. Liebeck had only about two or three seconds before burns set in, and the instantaneuous damage was already done. Plaintiff's witness expert, Lila Laux, testified that while people know that coffee burns can be and how quickly the burns can set in,<sup>4</sup> these burns do not know how severe (i.e., third-degree) these burns are hot, they do not know how severe (i.e., third-degree) these burns are.

Why did McDonald's make their coffee so hot? If this is dangerous, why did McDonald's make it? Customers were known and An obvious question needs to be asked at this point.

McDonald's coffee drinkers cannot all be wrong, can they? The reason for preparing the coffee at near-boiling temperature was to optimize the taste. Besides, one billion cups of coffee are served every day.

McDonald's knows that its coffee was being served at extremely hot temperatures, but market research told them that McDonald's customers "want hot coffee, they want it steaming hot and they expect to get it that way," McDonald's estimates from McDonald's quality assurance manager.

A: Yes, I had never seen photographs like that before.  
Q: And did you ever see any other kind of burns?

A: No, we have not. . . .  
officer at this temperature right . . . .

McDonald's continued to demonstrate this corporate indifference. McDonald's human factors engineer, Dr. P. Robert Knaff, restricted further demonstration of coffee burns that occur after "stirring" in cups of coffee prepared to the billion cups of coffee McDonald's usually. This callousness was further demonstrated by the company's quality assurance manager, who responded to the testimony of McDonald's quality assurance manager:

Q: So a fair way to assess your reasoning is, "A few people are being seriously burdened with deep second and third degree burns requiring hospitalization,"

Although coffee at various temperatures has the capacity to infiltrate burns, the problem with McDonald's coffee is the fast rate at which it could cause such serious burns. McDonald's own expert testified that his coffee served above 130 degrees could produce third degree burns, whereas McDonald's argued that its coffee was served above 130 degrees at 180 to 190 degrees.<sup>42</sup> However, this argument was some serious flaws that the plaintiff exploited. Charles

A: I think I already answered that.  
Q: And the answer is no, it's not, isn't it?  
A: Yes, we answered that.<sup>41</sup>

“If you don’t mind getting burned it’s hot for  
consumable fluid. My question is, is it hot to be drunk,  
actually fluid going down your esophagus?”

Q: If you don't mind, could you tell me a little more about the product? A: Sure, I'd be happy to. The product is a line of high-quality, eco-friendly skincare and beauty products. It's made from natural ingredients and is designed to be gentle on the skin. We've been in business for over 10 years and have a great reputation for our products.

A: It's perfectly fit to open the top and add cream and sugar and really diffuse the bread . . .  
means to drink . . .

and it's sold to them at McDonald's and they go to sit down and drink it in less than five minutes, it's not fit for consumption to drink, if consumption

The same McDonald's quality assurance manager continued to testify illustrating McDonald's capability: Q: So, when somebody buys a cup of coffee and it's cold, he said, A: Well, I think it's because

the coffee in their throat, that could happen, yes, it could get 40

Q: If customers attempt to swallow their coffee, isn't it a fact that it will scald their throat or esophagus? A: Yes, under those conditions, if they could not

Q.15. At that high temperature the coffee is a hazard.

A: I have tested before, the fact that this coffee can cause burns.

McDonald's own quality assurance manager testified that McDonald's enforced a policy requiring management that all coffee be served at 185 degrees or take five degrees. He also admitted that its coffee, given or take five degrees, because it would cause scalding injuries to the mouth and throat if drunk by the consumer.<sup>33</sup> (You know, as matter of fact, that coffee is a hazard, selling it at 180 to 190 degrees is a hazard, because it would cause scalding injuries to the mouth and throat if drunk by the consumer.)

help change the public perception of our legal system.

Second, our profession can and must do our part to certainly would not be the same if the award to purpose of punitive damages. A judgment of \$480,000 argues that the punitive damages should not have been decreased, especially in light of the argument can obviously be made that the punitive damages against a very unsympathetic corporate defendant. An McDonald's coffee is not a frivolous lawsuit, as many people believe. In fact, Ms. Liebeck had a very strong case McDonald's can be learned from this case.<sup>61</sup> First, the

fact that rarely ever makes headlines (in this case), or in any days worth of McDonald's coffee revenues.<sup>62</sup> However, two

daily coffee revenues amounting to approximately \$1.34 arrived at based on evidence the jury heard that McDonald's damages based on its finding of willful,reckless, malicious, Finally, the jury awarded Ms. Liebeck \$2.7 million in punitive that award was reduced proportionately to \$160,000.<sup>63</sup> because the jury found that Ms. Liebeck was 20% at fault, an award of \$200,000 compensatory damages.<sup>64</sup> However,

jury further determined that Ms. Liebeck's injuries met the implied warranty of fitness for particular purpose.<sup>65</sup> The of the implied warranty of merchantability, and breach of McDonald's was liable on the claims of producer defect, breach evidence, residuary and arguments of counsel, finding that The jury deliberated after hearing seven days of

## Our profession can and must do our part to help change the public perception of our legal system.

McDonald's has taken some remedial measures in drive-thrus now have a sign warning, "Coffee, tea and hot coffee are VERY HOT!" Also,

judge Scott ordered the parties to engage in a post-verdict settlement conference which resulted in a settlement with prejudice on November 28, 1994.<sup>66</sup>

[T]he written transcript is not going to reveal the attitudes of corporate indifference to reveal human consciousness. Defendants of the witness for the presented by defendant McDonald's as well as their employees, but the injury was exposed to it and I think that they properly considered it in their deliberations. And let me say that with knowing the risk of harm, properly considered it in their deliberations. And this is all evidence of the cup in which the adequate warning on the placement of cups simple, warn its consumers by placing just the most simple, coffee was served. . . . This is all evidence of cups that the corporate mental state and I conclude that the award of punitive damages is and was appropriate to punish and deter the Defendants for their wanton conduct and to send a clear message to this Defendants that corrective measures are appropriate.<sup>67</sup>

I think that there was evidence and argument about the Defendants knowledge that the argue could cause serious harm, but the Defendants knew that the coffee could cause serious harm, third degree, full tissue burns. The Defendants know that the coffee, at the time it was served, was too hot for coffee, at the trial, was recorded over three trials, started in regard to the reduced punitive damages award:

Judge Robert H. Scott, who presided over this trial, started in compensation (damages) for a total award of \$640,000,<sup>68</sup> were reduced by the trial court to \$480,000 (three times the allegedly "fraudulent" lawsuit) is that the punitive damages

sold by McDonald's each year.<sup>69</sup> However, investigating in comparison to the one billion cups of coffee burned suffered by McDonald's customers are "statistically factors engineer admitted that the number of hot coffee more serious burns in restaurants."<sup>70</sup> McDonald's human possible severe burns its coffee could cause because that McDonald's had chosen not to warn its customers of the to more serious injuries.<sup>71</sup> McDonald's executive testified unusual because of her older skin making her more vulnerable nature of the burns suffered by Ms. Liebeck were worse than after the spill.<sup>72</sup> McDonald's further alleged that the severe between her legs and by her own injuries by placing the coffee cup contributed to her removal from prompty contributed to her own injuries by placing the coffee cup between her legs and by her own injuries by placing the coffee cup

At trial, McDonald's argued that Liebeck A: No, I don't have a number in mind.<sup>73</sup> done to sell this coffee at a lower price? you to become so concerned that you would burn specialists be consulted and something else down the heat. Do you have in mind a number of how many people would have to be burned for is not a significantly high enough number to burn been burned. Obviously, to you 700 people here that have recordations here of some 700 people because I've shown you measure of the severity of each of these.

A: I think that I don't think we have a good in those computer printouts, is that right?

Q: So far you to say that you haven't formulated a company. Q: So far you to say that you haven't formulated a company that there have been enough severe burns to warrant turning down the temperature of your coffee, you are speaking without knowledge of the extent and severity of the burns that were received

I believe it's handled through our insurance A: I'm not intimately familiar with the process. those burns are? Do you know what they do to ascertain how serious burns that are recorded on Plaintiff's Exhibit No. 3? Corporation informs itself of the severity of the burns that are recorded on Plaintiff's Exhibit No. 3? Q: Mr. Appleton, do you know how McDonald's continually with our current practice. . . .

A: There's a very low probability of an accident as a result of using the product and we know that the customers want the product hot so we're at this time to stop selling it that hot.<sup>74</sup> there's not been enough burned to where we need but out of the billions of cups of coffee we sell,

6. We all know that political parties generally would not exploit their own agenda, but it does happen occasionally. See 140 Cong., Rec. H9766 (Sept. 27, 1994) (strategem of Rep. John Kasich, OH, R). ("Everybody in America is fed up with being sued by everybody for everything. I just have to refer to the case of the lady that sued and won for having been scolded by a cup of coffee she bought in McDonald's five minutes earlier.")

### The Actual Facts About - The McDonalds' Coffee Case

There is a lot of hype about the McDonalds' scalding coffee case. No one is in favor of frivolous cases of outlandish results; however, it is important to understand some points that were not reported in most of the stories about the case. McDonalds coffee was not only hot, it was scalding -- capable of almost instantaneous destruction of skin, flesh and muscle. Here's the whole story.

Stella Liebeck of Albuquerque, New Mexico, was in the passenger seat of her grandson's car when she was severely burned by McDonalds' coffee in February 1992. Liebeck, 79 at the time, ordered coffee that was served in a styrofoam cup at the drivethrough window of a local McDonalds.

After receiving the order, the grandson pulled his car forward and stopped momentarily so that Liebeck could add cream and sugar to her coffee. (Critics of civil justice, who have pounced on this case, often charge that Liebeck was driving the car or that the vehicle was in motion when she spilled the coffee; neither is true.) Liebeck placed the cup between her knees and attempted to remove the plastic lid from the cup. As she removed the lid, the entire contents of the cup spilled into her lap.

The sweatpants Liebeck was wearing absorbed the coffee and held it next to her skin. A vascular surgeon determined that Liebeck suffered full thickness burns (or third-degree burns) over 6 percent of her body, including her inner thighs, perineum, buttocks, and genital and groin areas. She was hospitalized for eight days, during which time she underwent skin grafting. Liebeck, who also underwent debridement treatments, sought to settle her claim for \$20,000, but McDonalds refused.

During discovery, McDonalds produced documents showing more than 700 claims by people burned by its coffee between 1982 and 1992. Some claims involved third-degree burns substantially similar to Liebecks. This history documented McDonalds' knowledge about the extent and nature of this hazard.

McDonalds also said during discovery that, based on a consultants advice, it held its coffee at between 180 and 190 degrees fahrenheit to maintain optimum taste. He admitted that he had not evaluated the safety ramifications at this temperature. Other establishments sell coffee at substantially lower temperatures, and coffee served at home is generally 135 to 140 degrees.

Further, McDonalds' quality assurance manager testified that the company actively enforces a requirement that coffee be held in the pot at 185 degrees, plus or minus five degrees. He also testified that a burn hazard exists with any food substance served at 140 degrees or above, and that McDonalds coffee, at the temperature at which it was poured into styrofoam cups, was not fit for consumption because it would burn the mouth and throat. The quality assurance manager admitted that burns would occur, but testified that McDonalds had no intention of reducing the "holding temperature" of its coffee.

Plaintiffs' expert, a scholar in thermodynamics applied to human skin burns, testified that liquids, at 180 degrees, will cause a full thickness burn to human skin in two to seven seconds. Other testimony showed that as the temperature decreases toward 155 degrees, the extent of the burn relative to that temperature decreases exponentially. Thus, if Liebeck's spill had involved coffee at 155 degrees, the liquid would have cooled and given her time to avoid a serious burn.

McDonalds asserted that customers buy coffee on their way to work or home, intending to consume it there. However, the company's own research showed that customers intend to consume the coffee immediately while driving.

McDonalds also argued that consumers know coffee is hot and that its customers want it that way. The company admitted its customers were unaware that they could suffer third-degree burns from the coffee and that a statement on the side of the cup was not a "warning" but a "reminder" since the location of the writing would not warn customers of the hazard.

The jury awarded Liebeck \$200,000 in compensatory damages. This amount was reduced to \$160,000 because the jury found Liebeck 20 percent at fault in the spill. The jury also awarded Liebeck \$2.7 million in punitive damages, which equals about two days of McDonalds' coffee sales.

Post-verdict investigation found that the temperature of coffee at the local Albuquerque McDonalds had dropped to 158 degrees Fahrenheit.

The trial court subsequently reduced the punitive award to \$480,000 -- or three times compensatory damages -- even though the judge called McDonalds' conduct reckless, callous and willful.

No one will ever know the final ending to this case.

The parties eventually entered into a secret settlement which has never been revealed to the public, despite the fact that this was a public case, litigated in public and subjected to extensive media reporting. Such secret settlements, after public trials, should not be condoned.
